

## Transition Pathway for Adult Learning Disabilities – Fylde and Wyre

Age 14

- Involvement from children's LD would be based on clinical need throughout as opposed to age.
- Criteria for involvement from Children's LD is moderate/ severe LD plus presenting need requiring intervention
- Although not yet in place, we have previously tried and intend on revisiting in the near future the opportunity for ourselves and adult LD to attend parent evening at schools around yr 9 or 10 to commence discussions with families around transition, MCA, annual health check etc.
- Interventions offered for all these age groups- Teenage Riding the rapids behavior course, Sensory workshops, sleep workshop, individual emotional literacy work, Individual behavior work
- Informing families of Annual health check, starts at 14 for all young people with LD
- Key worker function is available for young people open to LD who are scoring red on transforming care register to support with coordination of care between agencies where there may be an imminent risk of placement breakdown/ hospital admission

Age  
16

- As above
- Health Action Planning particularly where complex physical health needs are identified
- Ensure families are aware of and understand Mental capacity Act and how this affects decision making for their child/ young person
- If we are closing children who have no further unmet need we will share details of adult LD team, and if appropriate introduce them prior to discharge, so that families know of the team they would come to should they need to after the age of 18.
- Intensive support team are available for individuals open to LD Team age 16+ who are scoring red on transforming care (at imminent risk of hospital admission)

Age  
17

- Commence referral to adult LD if transfer of care is appropriate/ required at around age 17 and a half- joint work until young person turns 18.
- If referrals are received for young people aged 17 and a half+ who have not been known to children's LD Team previously, we would look to joint work with adults.

Age 18

- Transfer of care to adults is completed if identified as appropriate
